**Subject: McCann Solar Project -
Proposed Project Changes**

Northland Power Solar McCann LP has completed further design of the proposed McCann Solar Project (hereinafter referred to as the "Project"). Updates to the equipment selection have been made which have caused the initial design to be modified. The revised design remains confined within the previously identified Project boundaries.

All REA documentation was reviewed in light of these proposed Project changes. Table 1.1, attached, provides a summary of the changes in each affected document including the type of change, existing text, proposed change, rationale for the change, any altered effect associated with the design change, any new mitigation and new environmental effects monitoring requirements.

In all cases the altered effect will not result in a change to the proposed Project boundaries, respects previously identified setbacks from McCann Road, results in no new negative environmental effects, and reduces the number of noise sources on the Project site.

This information and the revised reports will be available on the Project website (www.northlandpower.ca/rideaulakes) as of Wednesday, December 14, 2011.

If you have any questions, please do not hesitate to contact me at 905-374-0701, Ext. 5280 or at smale@hatch.ca.

Sincerely,

Sean K. Male, M.Sc.
Environmental Coordinator
